6 NATIONAL OUTLOOK FOR TOMORROW MORNING 68/69 stations reporting · latest hour 21:00 MYT

Stations at closure risk	Schools in those areas	Expected schools affected	Monitored nationally
12 / 68	1,710	1,237	10,238
highest: Pasir Gudang, Johor (83%)	795,579 students · 68,410 teachers (16.5% of pupils)	605,655 students · 51,126 teachers · prob.-weighted	4,818,597 students · 417,462 teachers · 20 public universities

State	Status	Top station	Closure	7AM>150	Stns	Schools at risk	Exp. schools
Johor	Close / PdPR	Pasir Gudang	83%	88%	7 / 8	1,084	709

1 **Live badge** – green = the newest hourly DOE report is under 2 h old; amber/red = the feed is lagging or stale.

2 **Haze right now** – the sky, skyline and band name show how bad the air is across Malaysia at this hour.

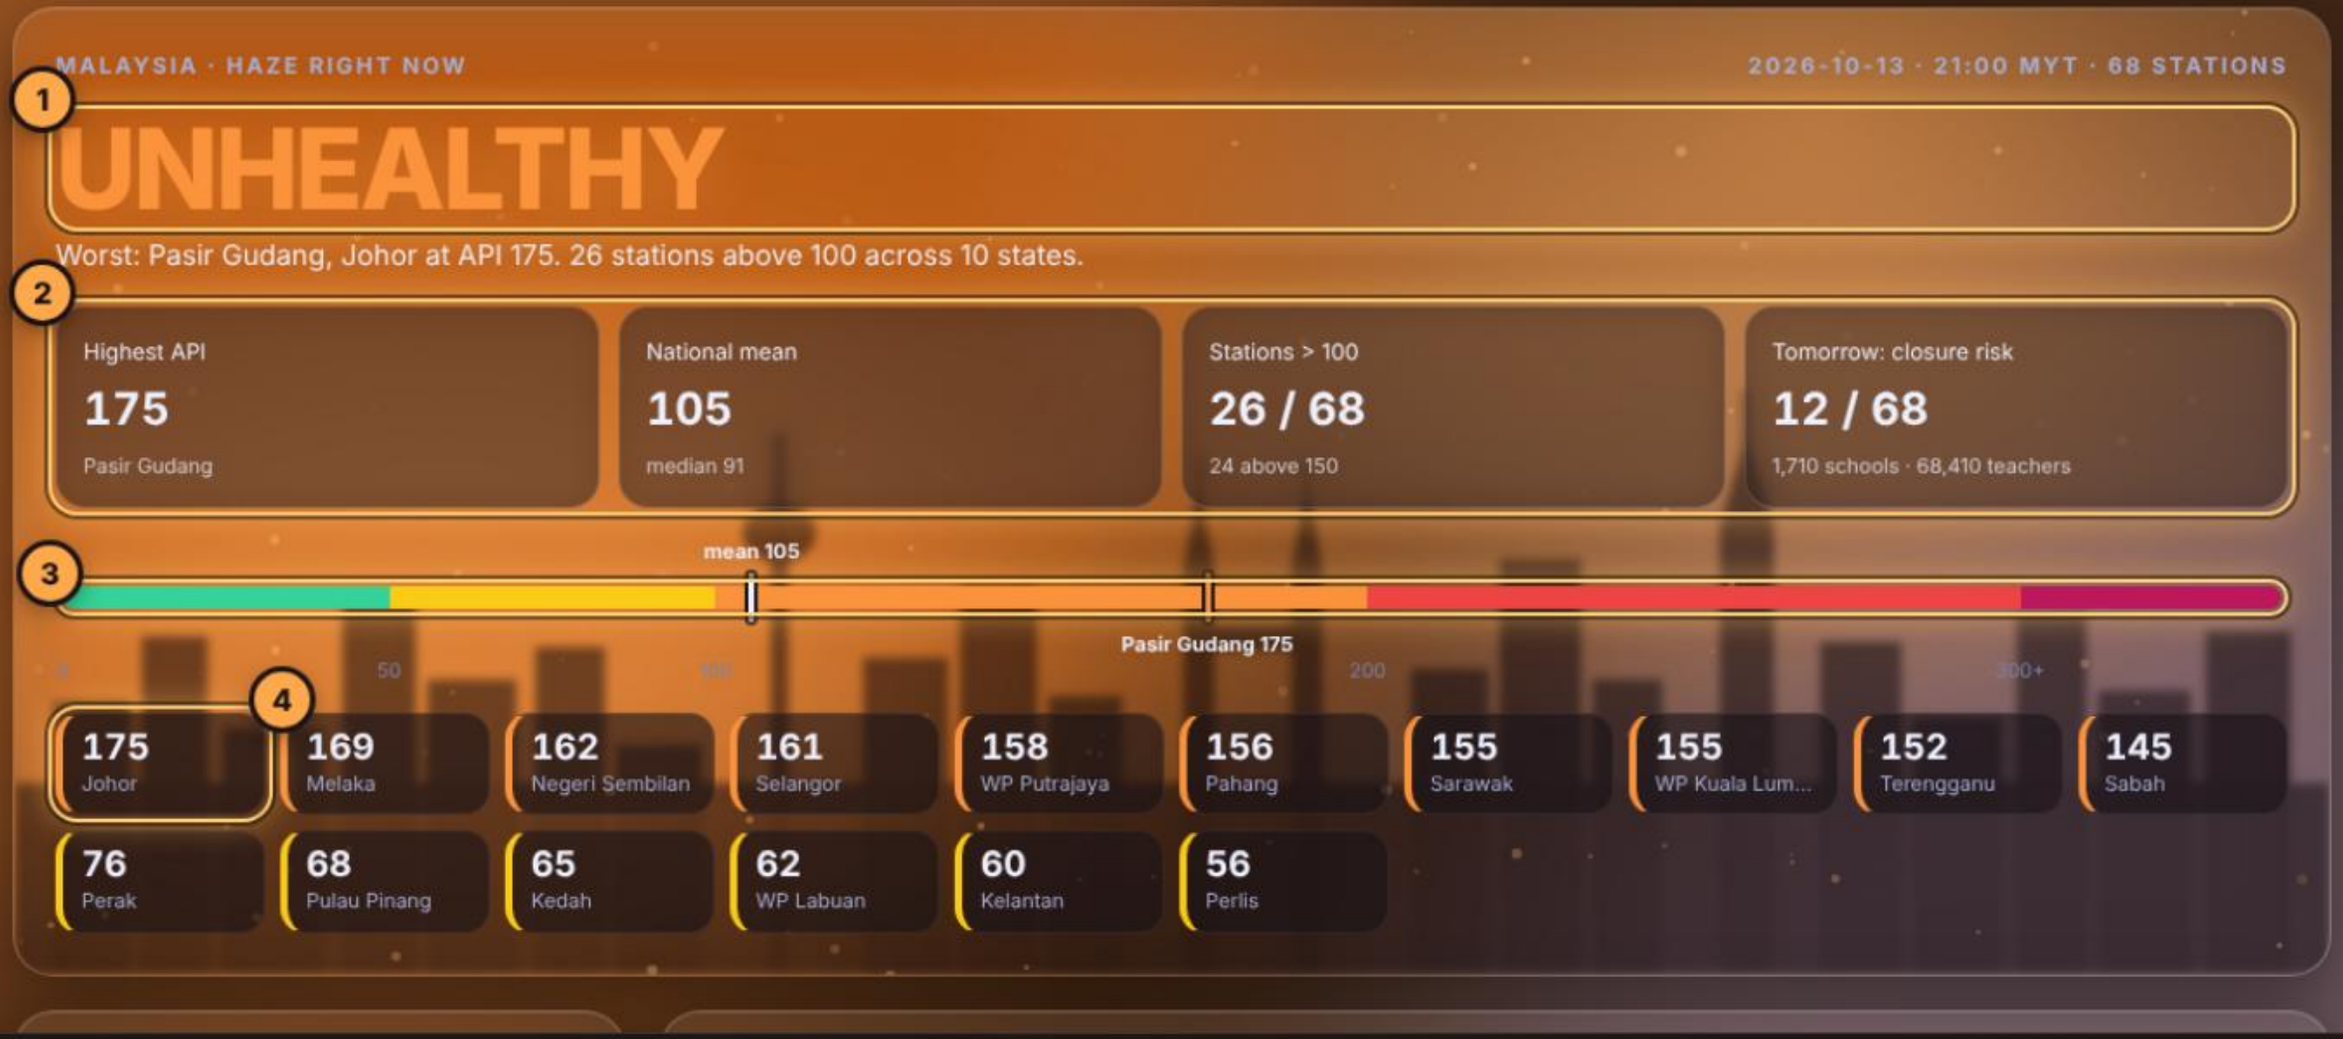

3 **State tiles** – highest API per state, coloured by band. Click one to open that state.

4 **Live data / What-if** – Live follows the newest report; What-if lets you type your own readings.

5 **State and station pickers** – choose any of the 68 DOE stations.

6 **National outlook** – tomorrow morning: stations at closure risk and the schools, students and teachers behind them.

Haze right now

1. **Band** – Malaysian API bands: Good 0–50 · Moderate 51–100 · Unhealthy 101–200 · Very unhealthy 201–300 · Hazardous 300+. The colour follows the *worst* station.
2. **Four numbers** – highest API, national mean, stations above 100 / 150, and tomorrow's closure-risk count.
3. **Band scale** – the white marker is the national mean; the coloured marker is the worst station.
4. **State tile** – the state's highest reading. The more haze, the thicker the particles and the blurrier the skyline.

Click a state to open its stations. 'Stns' = stations at risk / reporting. Status uses the cost-optimal closure trigger for the latest hour; 'Expected' weights each station's schools by its closure probability.

1 **Stations at closure risk** – stations whose closure probability is above the cost-optimal trigger.

2 **Expected schools affected** – each station's schools weighted by its closure probability (students and teachers shown underneath).

3 **Status** – Close / PdPR, Watch or Open per state, worst station first.

4 **Click a row** to open that state's stations in the detail panels below.

1

74%
closure risk

LARKIN · JOHOR · RECOMMENDATION

Close tomorrow · switch to PdPR

Closure risk 74% is above the cost-optimal trigger of 25%. Notify parents and hostels; re-check at 8 PM and 6 AM. ⚠ Inputs are outside the range seen in training – indicative only.

2

7 AM API > 100	7 AM API > 150	API > 180 in school hours	Streak rule
97%	82%	14%	70%
unhealthy	very unhealthy	closure trigger	tomorrow mean > 150

3

SCHOOLS IMPACTED · LARKIN

Schools in area	Students	Expected affected	If closed
322	306,385	239	322
govt primary + secondary · +1 public universities	21,415 teachers · 14.3 pupils per teacher	227,875 students · 15,927 teachers	306,385 students · 21,415 teachers

Source: data.gov.my / OpenDOSM catalogue: schools_district, enrolment_school_district, teachers_district, 2025 (government primary + secondary schools; tertiary institutions listed separately). Districts are assigned to their nearest DOE station (data/district_station_map.csv) – an approximation.

4

THREE SCENARIOS FOR TOMORROW MORNING

Best · improving	Base · unstable	Worst · closure
0.7%	25%	74%
7 AM reading ≤ 100. Announce open early; families can plan.	Unhealthy but below closure trigger. Open with restrictions; keep PdPR ready.	API > 180 in school hours, or 3rd straight day > 150. Close / PdPR.

1 **Recommendation** – open / open with restrictions / close-PdPR, with the closure ring and why.

2 **Probabilities** – 7 AM API above 100 and 150, API above 180 in school hours, and the 3-day streak rule (KPM's two closure triggers).

3 **Schools impacted** – schools, students, teachers and public universities in the districts mapped to this station; "expected" = probability × counts.

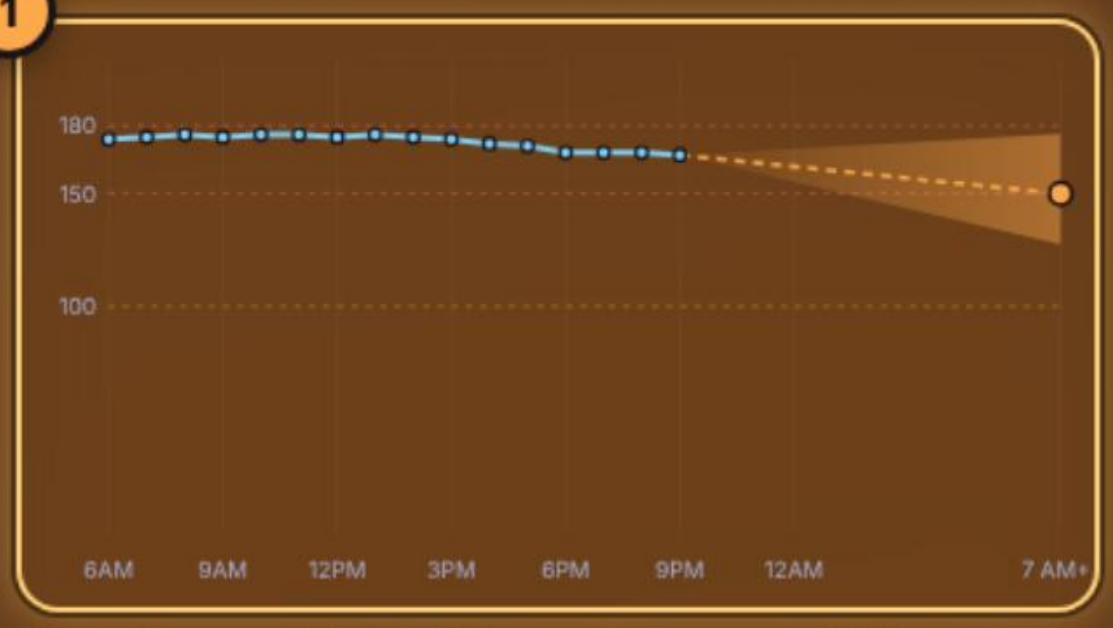

4 **Three scenarios** – best (improving), base (unstable), worst (closure). The framed one is the most likely.

STEP 5 · WHEN TO ANNOUNCE

The best announcement time reacts to your preferences

TODAY'S TREND → TOMORROW 7 AM

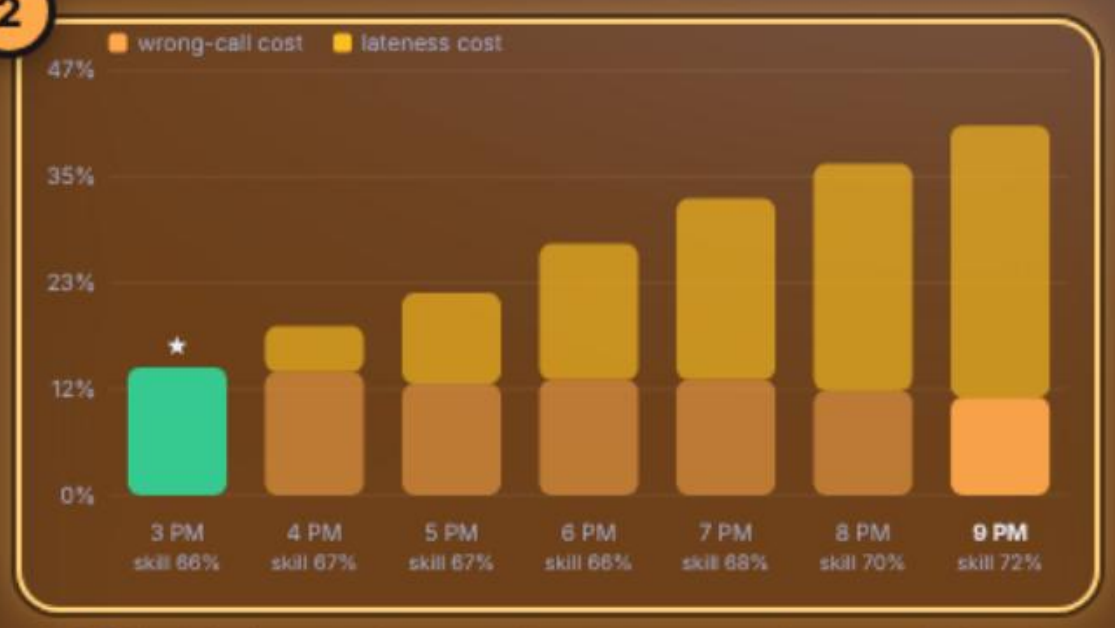

1

Dashed fan = model's 10–90% range for tomorrow's 7 AM reading (median 150).

BEST ANNOUNCEMENT TIME

2

★ 3 PM minimises total expected cost at your preferences (missed closure = 8× needless closure; each hour later = 5% of baseline). Click a bar to explore that hour in What-if.

Now drag "Cost of each hour later" from 5% to 0% (delay is free) – the ★ moves from the earliest hour to the latest:

DECISION PREFERENCES

Wrongly staying open costs × a needless closure **8**

3

ost of each hour later of baseline **0%**

BEST ANNOUNCEMENT TIME

4

★ 9 PM minimises total expected cost at your preferences (missed closure = 8× needless closure; each hour later = 0% of baseline). Click a bar to explore that hour in What-if.

1. **Trend + fan** – today's hourly API and the model's 10–90% range for tomorrow 7 AM.
2. **Cost bars** – wrong-call cost (missed closure vs needless closure) plus lateness cost for each candidate hour; ★ = cheapest. Click a bar to explore that hour.
3. **Decision preferences** (left panel) – how bad a missed closure is, and what each hour of lateness costs.
4. **Result** – with free delay the ★ moves to 9 PM because later hours forecast better; with costly delay the earliest hour wins.

STEP 6 · TRY YOUR OWN NUMBERS

What-if mode
